(54) Title: A PREFORM, A HEAD PART FOR A PREFORM AND A METHOD FOR MANUFACTURING A FIBRE

(57) Abstract: A preform, a head part for a preform and a method for manufacturing a fibre are described. Said head part being adapted to be attached to a preform of a fibre. Said head part has such a shape that a heat load directed to said preform will be distributed to the cross section of said bulk part in a predetermined manner, like evenly distributing the heat load to the cross section of the preform. When manufacturing a fibre from a preform comprising such a head part the heating of the preform is more controllable thus resulting in a fibre with a better quality.
